Vintech Pacific NZ Coolant Ethanol 1,000L

NZ Coolant Ethanol at <24% abv.

NON HAZARDOUS

Non-flammable refrigeration ethanol at a concentration of 24% ABV.

This concentration is used because it keeps the solution below the threshold for classification as a flammable liquid under safety standards like AS1940, while still providing freezing protection to reach temperatures of approximately -16° C.

Produced exclusively from New Zealand wines.

Note: Empty IBCs to be returned to the nearest Vintech Pacific regional facility at the buyer's cost.
